Assess, Automate, and Accelerate SAP HANA code migrations

Jumpstart your migration projects

The Accelerated Migration Factory

Custom Development Impact Assessments, and remediation for your enterprise

For the companies running SAP, migration to SAP S/4HANA is no longer an option—it's a requirement, and the question isn't if you should move to SAP S/4HANA, but rather when you should do it.

The biggest challenge customers face is the transformation of the custom code for the SAP HANA database. SAP customers have created thousands of custom code objects over the years to meet their business requirements. The very thought of adapting these objects for HANA and S/4HANA is enough to send a shiver down spine of SAP customers who are contemplating migrating to suite on HANA.

When it comes to code transformation, it is more unknowns than knowns. SAP recommendations can result into thousands of issues. It is extremely difficult for the customers to know what changes are mandatory, and what can be pushed down to post-migration and how much code needs to be changed.

PrideVel offers our "[SAP HANA Accelerated Code Migration Factory](#)" to support custom code migration from assessment to remediation to deployment support. Our Accelerated Code Migration Factory leverages Gekkobrain to assess, and to automate code transformation to meet HANA compliance and performance issues.

Your challenges answered

- How much effort - Figure out upfront the amount of effort needed to transform the code
- What needs to be fixed - Identify the code that needed to be fixed and code that is not used
- Efficient and error free - Automated transformation for mandatory and performance issues
- What cost and time - realize great savings on time and cost with proven migration tools and methodologies

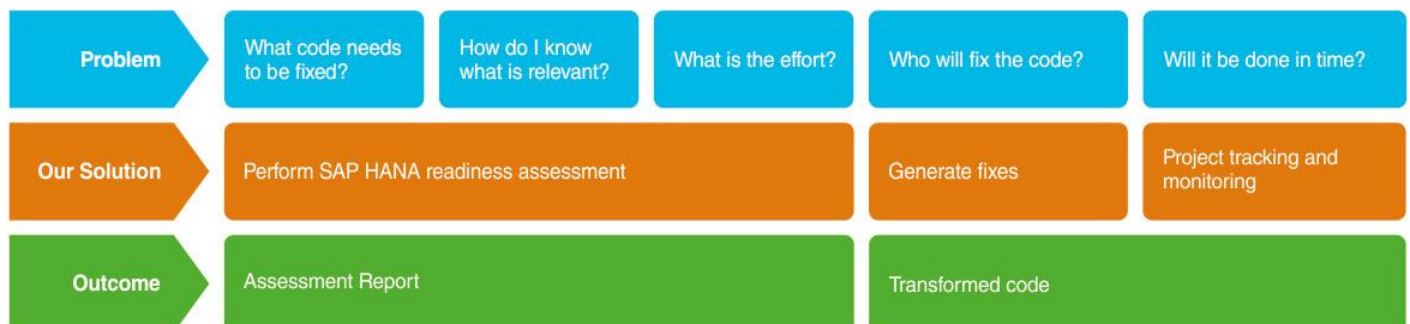

Why YOU need this!

- Greatly control risks and improve success rate with our proven tools, methodologies, and experience
- Know exactly what is relevant and what's not – more than 80% of issues are not relevant to fix
- Project management tools built into Gekkobrain to manage and monitor the transformation
- Achieve cost and time savings with a high degree of automation
- Above all, worry free code transformation

How PrideVel can help you accelerate code migration to SAP HANA

PrideVel's 4-step accelerated code migration process

Gekkobrain tool for HANA Readiness

Engagement models

Turn-key

Worry free turn-key engagement where we take complete ownership of transformation and give you fixed price quote. This provides full use of the migration factory to get work done in more efficient and cost-effective way.

Advisory

We play an advisory role where you use our tools and we advise your team on how to go about transforming the code. This approach may be cost effective if you have an ABAP team with experience in transforming code for HANA.
