

As you start planning for the migration of your ERP to SAP HANA, you begin to realize that a very large number of custom ABAP objects will need to be adapted to run on the SAP HANA database. The Custom ABAP in your system poses a big risk and may also greatly jeopardize your journey to SAP HANA.

SAP has recommended several changes that you need to make in your pre-HANA ABAP code as part of your HANA migration activities. This task can lead to additional efforts up to several person years. In addition to the mandatory fixes, you also need to ensure that the migrated code continues to run optimally on HANA and there are no logical or performance issues you continue to have in your code that may impact the business users.

Key custom code challenges:

Below are some of the questions you will face when it comes to custom ABAP remediation for SAP HANA.

- How do I know what changes I need to make in the code?
- Do I need to make all recommended changes prior to Go Live on SAP HANA?
- How do I prioritize changes in order of importance/impact?
- How much effort and resource I need to plan?
- How do I track the progress?
- How do I know the performance of the code once it is changed for the SAP HANA database?
- How do I know if my programmers do not change their coding style for SAP HANA?

What we offer:

We offer a fixed cost turnkey solution for custom code remediation and code management that answers the above questions and more. With our use of automation tools coupled with our extensive experience with ABAP coding and SAP internals, we provide:

- Complete ownership of custom ABAP remediation project

- Detailed assessment of custom code upfront
- Automated code fixes eliminating the risks of new errors being introduced by manual modifications
- Reduction in cost by over 80%
- 100% assurance that your code is HANA ready. No going in circles
- Ongoing monitoring and improvement in the code post migration
- Multiple dashboards for code execution monitoring
- Predictive analytics for potential issues detection before they occur

About PrideVel

PrideVel is an SAP Services Partner providing SAP implementation and support services to SAP customers across all industries.
